Just so we're all 100% clear here: When you share a file, data is being transferred between your computer or phone and our servers, then from our servers to your friends device. Unfortunately, we can't make that part free. So try our free and simple filehosting service now. Our service is completely free for everyone. You can give this download link to your friends by mail or instant messenger. filehosting provides an easy possibility for you to send large files to your friends. We have no file size limit. If only we could, we surely would! On the other hand, using file can actually save you money. Simply upload your file and share the link. Files can be downloaded from any computer from our high speed servers. It is also allowed to link to the download page from websites and communities. You decide who you want to share your files with. Just upload the file you want to share with your friends and we send you a download link to your file. You can upload any type of file (movies, music, documents, images, zip files and more). The cost of that data transfer is covered by your internet service or the data plan on your phone. Keep your files private, or send your download links only to friends or family. Files transferred the old-fashioned way tend to pile up and be forgotten about, eventually costing you money in data storage fees. When you use file, you avoid storing the file you're sending in your cloud storage or mail server. Why pay storage fees for a file that you just wanted to send to a friend or colleague? Also, many team chat apps have limits to the size of files that can be transferred within their apps. Alternatively you can choose to share your download links on blogs, forums and social networking sites. No account or credit card is required to get started.
